Varsity Path Logbook

TASKBOARD

Product Backlog	In Progress	Completed
Sprint 1: Account registration and sign-in • Develop the account registration and sign-in functionality. • Implement secure authentication and account-based access. • Add sign-out functionality and session persistence. • Create empty states for newly registered learners. • Ensure learners can only access their own accounts and information.		Authentication approach and account-based access requirements documented.
Sprint 2: Improve – manual results • Develop a manual results-entry feature for learners to capture their academic marks. • Allow learners to add, edit and delete subject results. • Include fields for subjects, assessment topics, marks and dates. • Implement validation to ensure marks are between 0 and 100. • Display saved results on the learner dashboard.		Manual result fields and validation requirements documented.
Sprint 3: Improve – upload and AI extraction • Allow learners to upload academic results in PDF, PNG, JPG and JPEG formats. • Implement AI-powered extraction to identify subjects, topics, marks and assessment dates. • Display extracted information in an editable format. • Allow learners to review and correct extracted information before saving. • Provide error messages for unreadable, unsupported or incomplete files.		AI extraction workflow and human review requirement documented.
Sprint 4: Learning insights • Develop a learning insights feature that analyses saved academic results. • Identify learners' academic strengths and weaker subjects.		Learning-insight requirements for strengths, weaker subjects and topic gaps documented.

• Highlight topics that require additional attention. • Display academic performance through visual indicators and progress summaries. • Generate insights using actual learner data rather than sample information.		
Sprint 5: Apply results • Develop a separate section for capturing academic results used for university applications. • Allow learners to add, edit and delete application results. • Implement duplicate-result prevention. • Ensure Apply results remain separate from Improve results. • Organise academic information to support university eligibility calculations.		Separate Improve and Apply data workflows documented.
Sprint 6: University Explorer and eligibility • Develop a university exploration feature for UCT, Stellenbosch University, UWC and CPUT. • Display available institutions, faculties and study programmes. • Implement filters to help learners explore programmes based on their interests and academic results. • Develop eligibility calculations using institution-specific admission requirements. • Include the seven-unique-subject requirement before calculating eligibility. • Provide links to official university websites so learners can verify admission requirements.		Supported institutions and eligibility principles documented for UCT, Stellenbosch University, UWC and CPUT.
Sprint 7: Study Planner and goals • Develop a personalised study planner based on learners' academic performance. • Allow learners to create study goals and tasks. • Enable learners to mark tasks as completed or reschedule them. • Display weekly study progress.		Study Planner fields and requirements based on actual learner results documented.

• Recommend areas of study based on weaker subjects and identified topic gaps. • Prevent duplicate study tasks from being created.		
Sprint 8: Application Tracker • Develop an application tracking feature to help learners monitor university applications. • Allow learners to add institutions and study programmes. • Implement application statuses such as Planning, Not Started, In Progress, Submitted, Under Review, Accepted, Not Accepted and Waitlisted. • Generate unique application reference numbers where applicable. • Prevent duplicate applications. • Provide links to official university application portals	Application tracking fields, suggested statuses and official portal handoff documented.	
Sprint 9: Security, testing and release readiness • Conduct end-to-end testing of all major platform features. • Verify that learners can only access their own personal and academic information. • Review database security rules and authentication. • Validate academic scoring and university eligibility calculations. • Test file uploads, AI extraction, application tracking and study planning. • Resolve identified bugs and interface issues. • Test the production build and check mobile responsiveness. • Prepare the application for final deployment and presentation.		Technical architecture intended Firestore user-data paths, privacy considerations and QA checklist documented.

WALKTHROUGH

1. What do we need to do to advance this piece of work?	To move Varsity Path forward, the team needs to: ➢ Confirm the project scope and learner user journey. ➢ Prioritise the product backlog and agree sprint goals. ➢ Define acceptance criteria for Improve, Apply, Study Planner, University Explorer and Application Tracker. ➢ Review the interface design system and wireframes. ➢ Confirm data structures, authentication and access rules. ➢ Plan tests for scoring, eligibility, uploads and application status.
2. Is anyone working on anything that is not on the board?	No additional work has been identified outside the Varsity Path backlog.
3. What do we need to finish as a team?	As a team, we need to deliver: • Account-based registration and sign-in. • Manual and reviewed upload-based school-result entry. • Learning insights, goals and study-planner tasks. • Programme discovery for UCT, SU, UWC and CPUT. • Institution-specific eligibility explanations with official sources. • An application tracker with clear, accurate statuses. • An assistant that uses saved learner data appropriately. • Tested privacy controls, persistence and error handling.

4. Are there any bottlenecks or blockers to the flow of work?	Potential blockers include: ➢ Limited time for design, implementation and testing. ➢ University admission requirements and deadlines changing over time. ➢ Incomplete or unreadable uploaded results. ➢ AI, network or authentication service failures. ➢ Incorrect scoring or eligibility rules if requirements are not verified. ➢ Privacy risks if per-user database access rules are misconfigured. ➢ Limited access to development tools, connectivity or hosting resources. ➢ Unclear task ownership or uneven workload distribution.

LOGBOOK

Date:	24 August 2026	
Monday	1. What did I complete since the last standup?	Reviewed Varsity Path's purpose, target Grade 11–12 learners and the main user journey. From a frontend perspective, identified the screens needed for dashboard, Improve, Apply, Study Planner and university exploration.
	2. What am I planning to complete between now and the next standup?	Review the user stories and map each story to the pages, reusable components and navigation needed on the frontend
	3. What are my impediments (or risks or problems)?	The number of features makes it important to agree on a clear navigation structure and prioritise the core learner journey.

Date:	25 August 2026	
Tuesday	1. What did I complete since the last standup?	Review the user stories and map each story to the pages, reusable components and navigation needed on the frontend.
	2. What am I planning to complete between now and the next standup?	Refine the Apply section and university exploration interface, ensuring that learners can explore available institutions, view programme information and track their application progress

	3. What are my impediments (or risks or problems)?	Displaying academic results and university admission information clearly can be challenging. The information must be organised properly so learners can make informed decisions.

Date:	26 August 2026	
Wednesday	1. What did I complete since the last standup?	Refined the Study Planner and other learner dashboard components. Reviewed how study tasks, goals and academic information are displayed. Improved the consistency of reusable interface elements, including cards, buttons, forms and navigation components.
	2. What am I planning to complete between now and the next standup?	Review the integration between the frontend and backend, check that learner information is saved correctly and verify that the main features respond as expected.
	3. What are my impediments (or risks or problems)?	Some features depend on the same learner data, so screen behaviour and loading/empty states must be planned early.

Date:	27 August 2026	
Thursday	4. What did I complete since the last standup?	Conducted final checks on the main Varsity Path features, including the dashboard, Improve, Apply, Study Planner and university exploration. Reviewed navigation, form validation, responsiveness and the overall user experience. Identified areas requiring minor corrections and improvements.
	5. What am I planning to complete between now and the next standup?	Complete the remaining interface adjustments, prepare the final demonstration and presentation materials, and ensure that the application is ready to be presented.
	6. What are my impediments (or risks or problems)?	Limited time before the final presentation may make it difficult to address unexpected issues. The priority is to ensure that the main features are stable and that the presentation demonstrates the application's purpose effectively.

Date:	28 August 2026	
Friday	4. What did I complete since the last standup?	Completed the final preparation and presented the Varsity Path application. Demonstrated the main features, including the learner dashboard, academic performance improvement tools, university exploration, application tracking and Study Planner. Explained how the platform supports Grade 11–12 learners in making informed academic and career decisions.
	5. What am I planning to complete between now and the next standup?	The project presentation was completed. The next step is to review the overall project experience, reflect on the development process and identify possible improvements for future versions of Varsity Path.
	6. What are my impediments (or risks or problems)?	No major impediments prevented the final presentation. However, future improvements may be needed to enhance the platform's functionality, accessibility, mobile responsiveness and overall learner experience.
